

Zagros Engineering

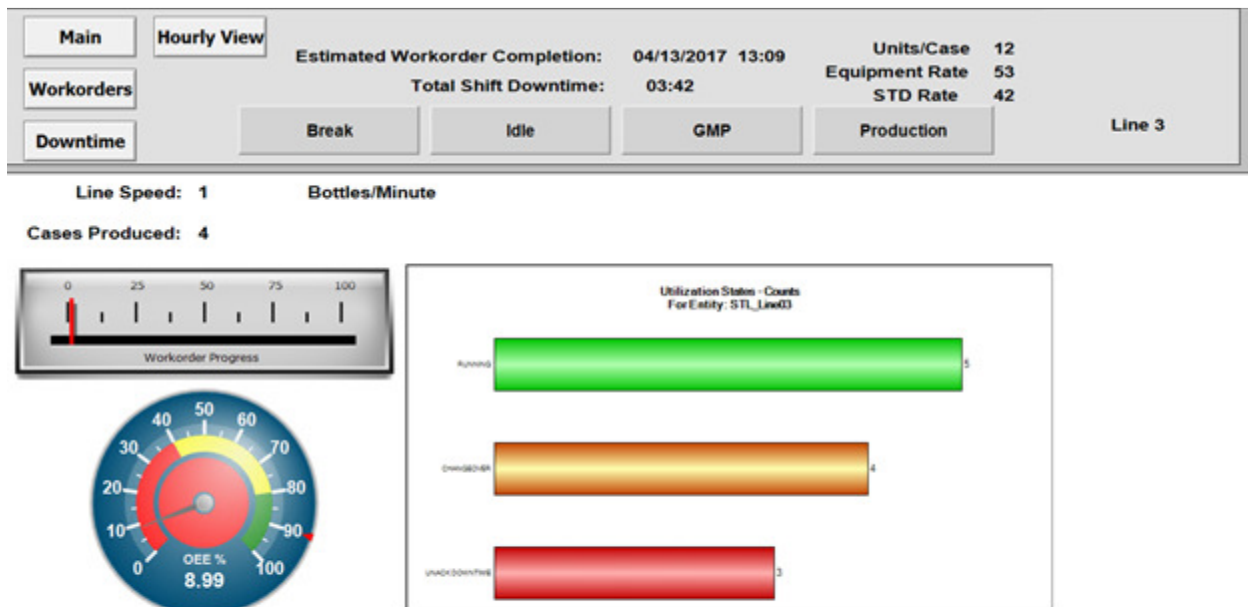

Packaging Line Performance Analysis Manufacturing Execution System

Zagros Engineering developed a new Manufacturing Execution System for a manufacturer in St. Louis, MO. The system replaced stacks of hand written forms and eliminated manual entry of this data into the existing ERP system.

The system is based on Wonderware System Platform and Performance.

The system provides the following capabilities

- The production schedule is made available to the line operators from the existing AS400 based ERP system in real time.
- The system captures production counts and downtime reasons from 7 packaging lines.
- Production and OEE data is imported into the existing corporate AS400 based reporting system.
- The system provides a suite of customized reports.

Zagros Engineering

The system allows operators to enter detailed information for downtime events for later analysis.

Zagros Engineering

Wonderware Performance includes a number of reports that allow the analysis of downtime and production data:

Zagros Engineering

Zagros Engineering

Zagros also developed a suite of custom reports for this project. These reports replaced data collected by hand for daily, weekly and monthly review meetings.

Changeover Report

The changeover reports are used by the production management and scheduling team to review the actual amount of time each changeover takes. This allows the scheduling process to use actual data in the planning process. This report also helps identify opportunities for improvement.

The screenshot displays a software interface for generating a changeover report. At the top, there are filter fields: Start Time (1/27/2017 7:41:47 PM), End Time (1/31/2017 7:41:47 PM), Reason (All), Line (ALL), and SKU (ALL). There are also checkboxes for 'Show expanded?' (True/False) and a 'Find | Next' button. Below the filters is a table with the following data:

Changeover	Start Time	End Time	Duration
Size Change	1/27/2017 8:00:00 PM	1/27/2017 10:01:27 PM	02:01:27

The Maintenance report includes time of response and time to repair data. It also includes any comments made by mechanics which can be entered at the packaging line.

Zagros Engineering

Data Scoreboards provide real time data on each line and in the supervisor's office. The line scoreboards display the current state of each line and progress against the current schedule.

Packaging Line Scoreboard

Zagros Engineering

The supervisor scoreboard displays the current state of each line and progress against the current schedule.

Supervisor Scoreboard

The supervisor scoreboard also displays the current production schedules for each line.

The Schedule Board

As changes are made to the production schedule in the existing ERP system; changes also appear on the schedule scoreboard in the supervisor's office in only a few minutes.

Zagros Engineering

The implementation of a Manufacturing Execution System (MES) saved our client time and money. Collecting the data our client is concerned about and providing data where and when they need it allows our client to take proactive measures and spend less time on data collection.

Zagros Engineering offers a wide range of manufacturing system integration services. We specialize in providing accurate data to people that need it, when they need it. We customize MES Systems to answer the individual needs of each manufacturer. Our services range from building the servers to providing specialized reports with the accumulated data.

Our Manufacturing Execution System (MES) team specializes in the following areas:

- Recipe Management
- Performance Analysis (OEE)
- Data Historians
- Reporting Systems
- ERP(Enterprise Resource Planning) Integration

Please visit zagroseng.com for more information or call Jamar Neal at (314)703-1321.
